AI your whole organization shares

Yurika

AI Agent for Work

An AI that knows your company's templates,
files and work through **agent packs**,
handling your organization's work from day one.

This brochure is not a feature list. It starts from the seven concerns that companies actually raise when they bring AI into their organization.

Each concern is followed by its solution, page by page.

Introduction

Introduction	Seven concerns of companies bringing AI into the organization	p.03
Solution	How personal AI and AI for work differ	p.04
Agent pack	The core of Yurika: agent packs	p.05

Seven concerns and solutions

Concern 01	Everyone uses a separate personal AI, and results vary	p.06
Concern 02	AI doesn’t know our company’s templates and rules	p.08
Concern 03	People are told to try it but don’t know what to ask	p.10
Concern 04	No one is available to build agents	p.11
Concern 05	Outputs are scattered across personal accounts, unmanaged	p.12
Concern 06	Results are moved by hand into email and file servers	p.14
Concern 07	There is no AI that fits our industry	p.15

Use cases & adoption

Environment	Start in the browser, add the desktop app when needed	p.16
Use cases	How a department pack changes the day	p.17
Adoption	From trial request to contract and more packs	p.19
Contact	Request a trial · Contact sales	p.20

What we often hear

The seven concerns companies raise first when bringing AI into the organization

There is no shortage of AI. Yet the way organizations work has not changed.

These are the stories we hear again and again in adoption meetings.

Click the concern that matters most to you to go straight to how Yurika solves it.

Concern 01 “Everyone uses their own AI, and results vary.” Organizational AI →

Concern 02 “AI doesn’t know our templates and rules.” Company templates →

Concern 03 “People try it, but don’t know what to ask.” First-time users →

Concern 04 “We have no one to build work agents.” Adding packs →

Concern 05 “AI outputs are scattered in personal accounts.” Control →

Concern 06 “We copy results back into email and file servers.” Connectors →

Concern 07 “There’s no AI that fits our industry.” Industry packs →

Personal AI and AI for work

Not personal AI, but AI for work that your whole organization shares.

AI Agent for Work

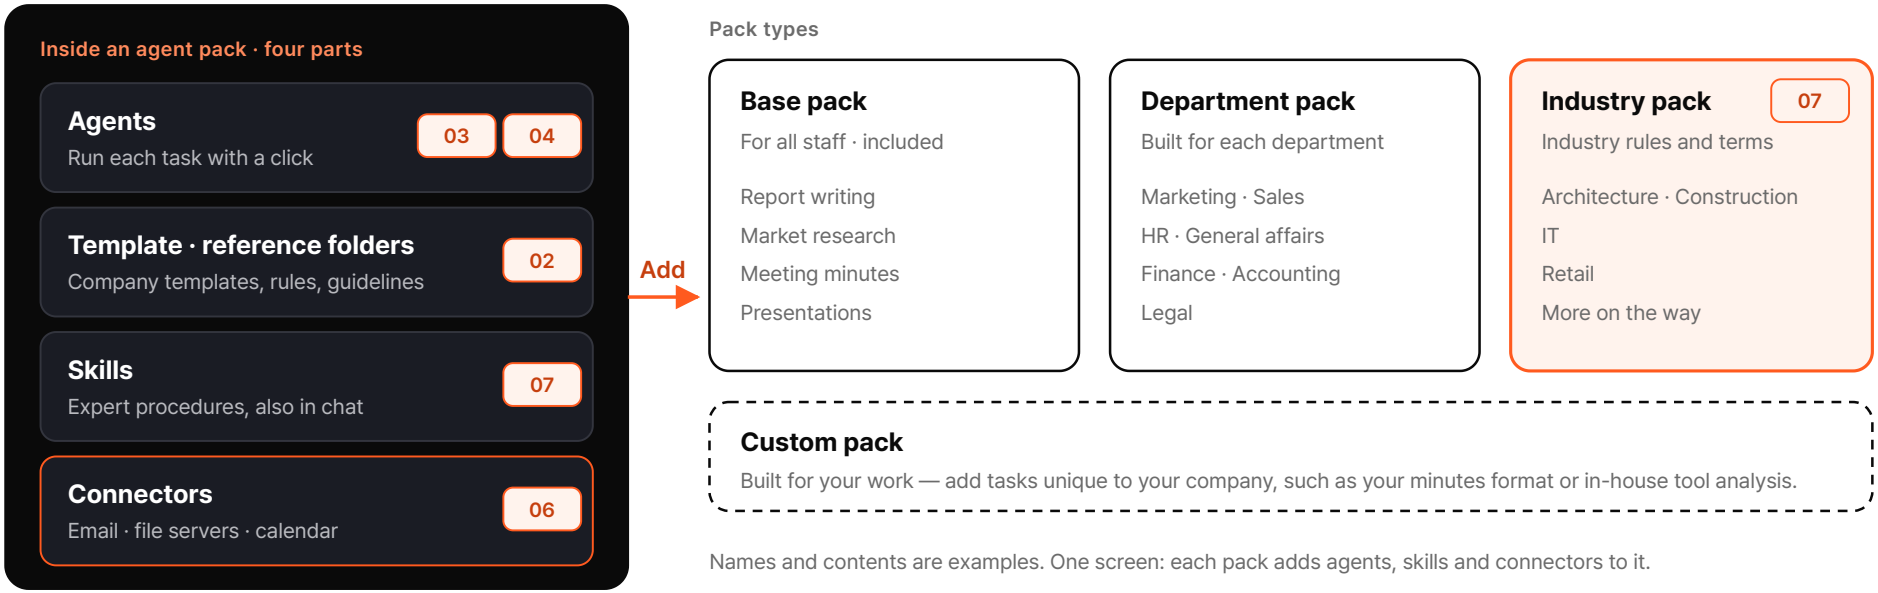

Just as personal email differs from company email, so does AI. Use external AI as a personal assistant, and Yurika for your organization's work.

Category	Personal AI (external AI)	AI for work · Yurika	
Who uses it	Each employee, on a personal account	**The organization, together in one environment**	Solution 01
Company templates · files	Pasted in and explained every time	**Created from templates and references in the repository**	Solution 02
How you start	A prompt in an empty chat window	**Click an agent to start, finish in chat**	Solution 03
Work agents	Built by users themselves	**Ready as soon as you add an agent pack**	Solution 04
Outputs · usage records	Stay in personal accounts	**Collected in the repository; the company reviews and controls**	Solution 05
Business systems	Results moved by hand	**Connected to email and file servers through connectors**	Solution 06
Industry fit	Users explain it each time	**Industry packs · custom packs**	Solution 07

The core of Yurika

The more agent packs you add, the more your organization can do.

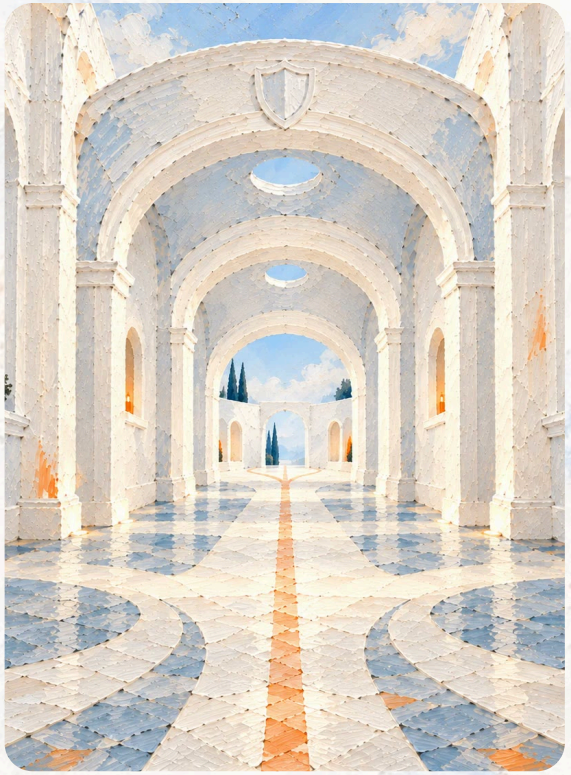

Agent pack One bundle with everything a task needs: agents, templates and references, skills and connectors.

Names and contents are examples. One screen: each pack adds agents, skills and connectors to it.

Click a “Concern” number to jump to that concern.

Concern 01 · Personal AI

Everyone’s using their own AI, and the results are all over the place.

What executives and team leads say most often at companies that allow AI at work.

What happens on the ground

Same task, different results

People ask in different ways and use different formats, so even the same report follows different standards.

Company files are pasted in every time

Personal AI doesn’t know your company’s files. To get a usable answer, people have to find them and paste them in.

Know-how stays with individuals

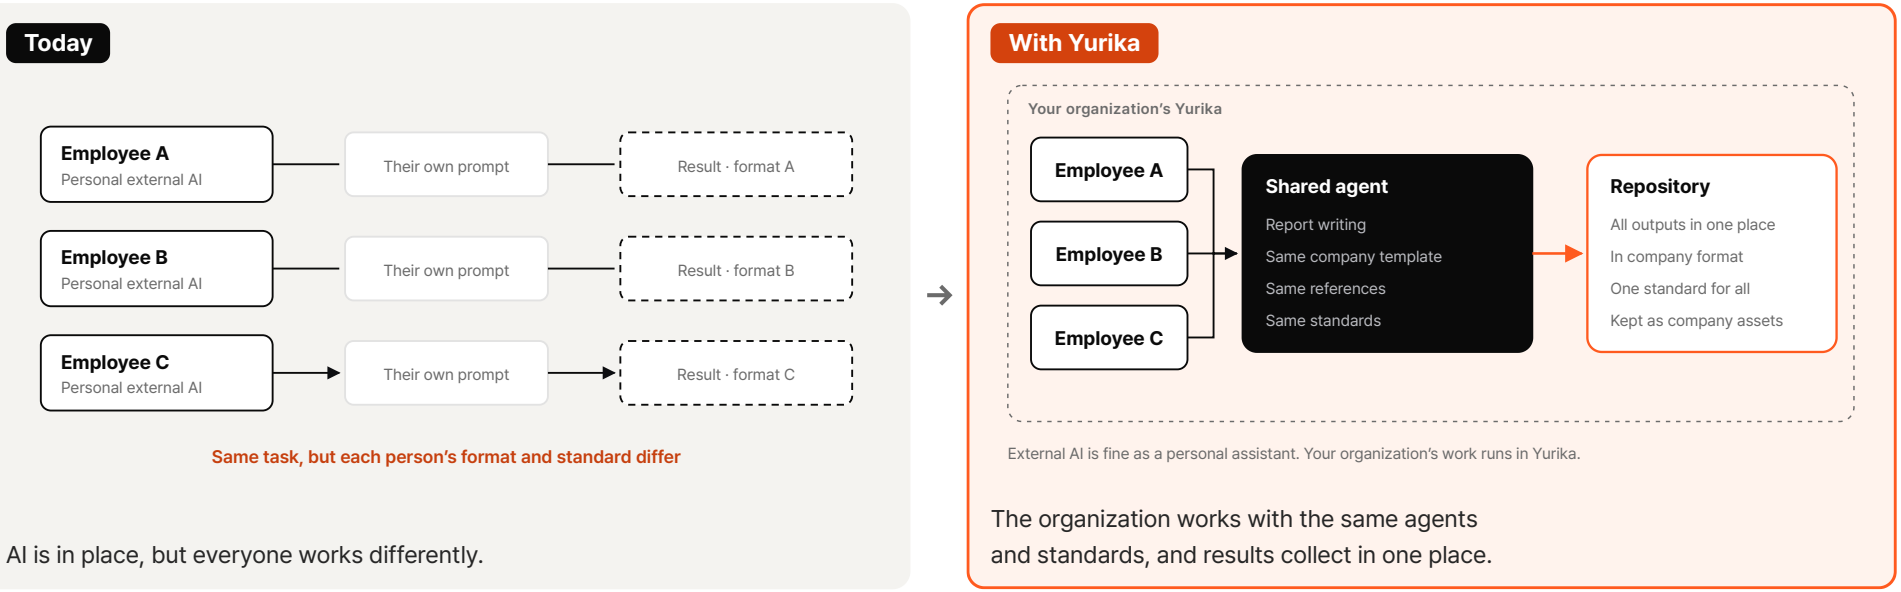

Good prompts and outputs stay in personal accounts and never become assets of the organization.

The hidden worry “We brought in AI, but the way we work hasn’t changed.”

See how Yurika solves it →

Solution 01 · Organizational AI

Not AI that everyone uses separately, but AI your whole organization shares.

One environment for the organization

Open Yurika for the whole company; employees use it together with their company accounts.

Share the same agents

Share well-built agents so the work follows the same standard, whoever runs them.

Outputs go to the repository

Documents and files collect in the organization's repository and become references for the next task.

A clear split with personal AI

Use external AI as a personal assistant, and Yurika for your organization's work.

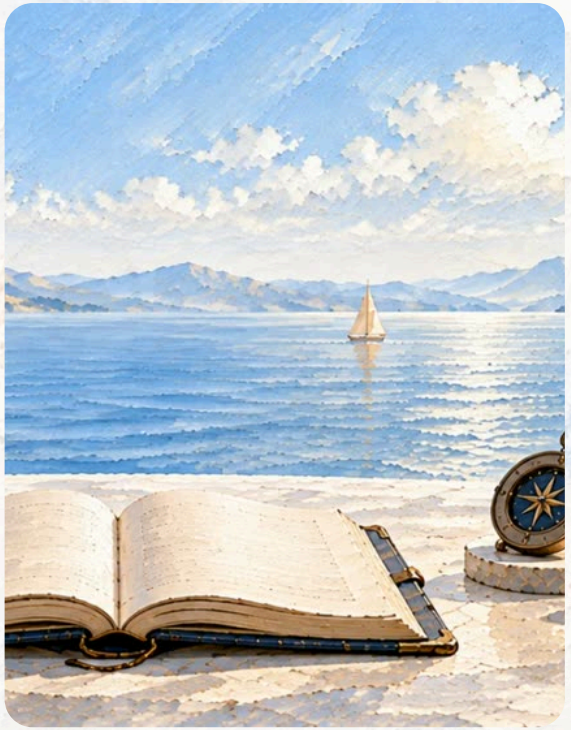

What you gain

- ✓ The same format and standard, whoever does the work
- ✓ Well-built agents and outputs build up in your organization
- ✓ The more you use it, the better it fits your company

Concern 02 · AI that doesn’t know your company

The AI doesn’t know our templates or our internal rules.

What we hear from staff who produce reports, official letters and presentations every day.

What happens on the ground

Drafts are redone in company format

AI documents come out in a generic format. To submit them for approval, staff rework them into the company template.

Answers conflict with internal rules

AI doesn’t know your guidelines and rules, so every answer has to be checked again.

Every request starts with an explanation

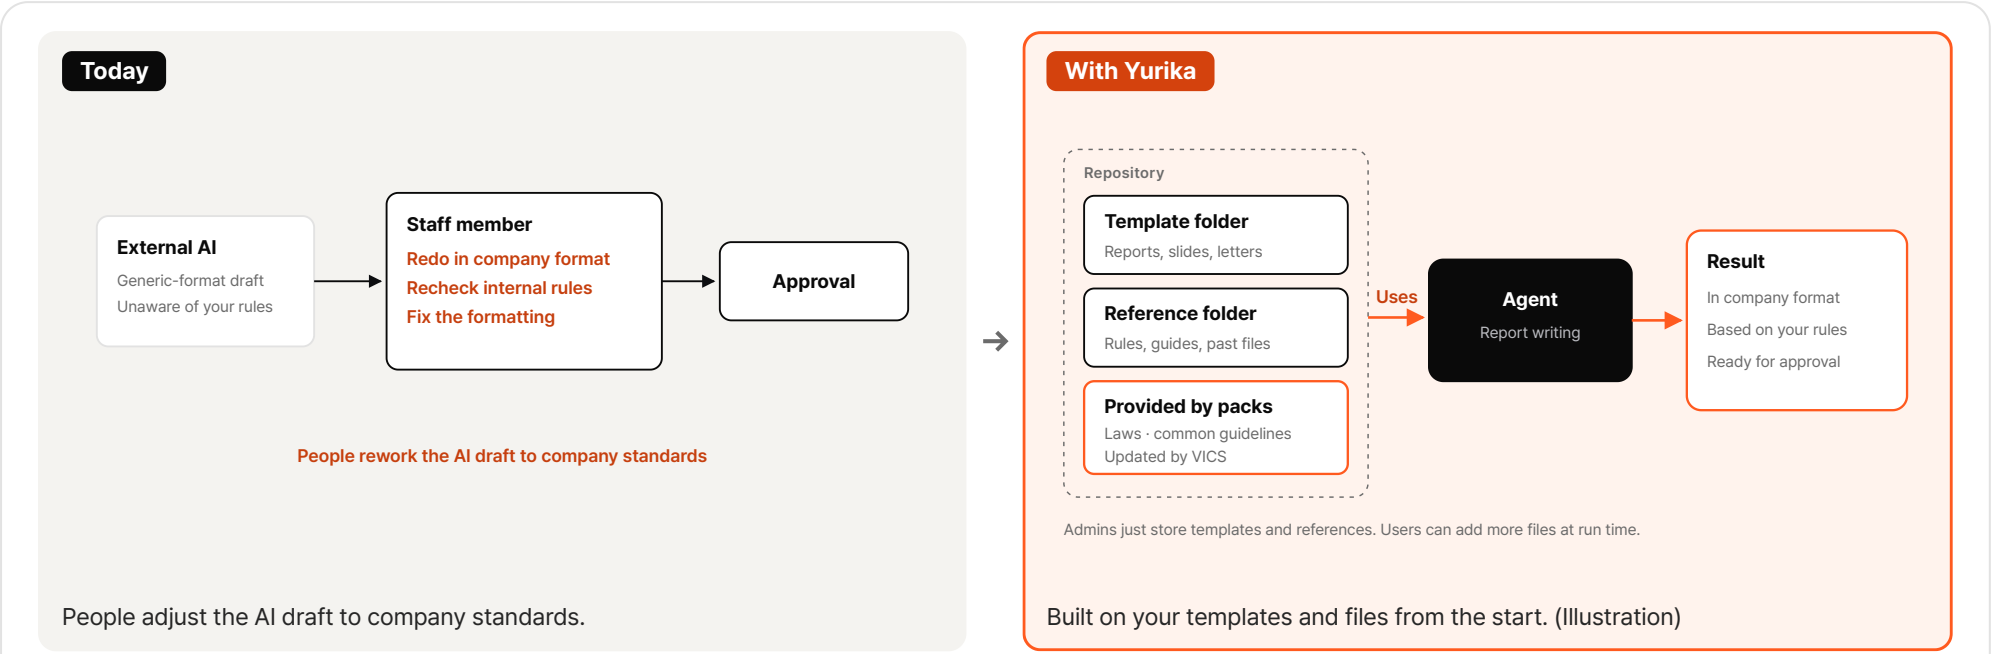

To make the AI understand the company’s situation and standards, staff add long explanations each time.

The hidden worry “That fixing AI drafts ends up taking even more time.”

See how Yurika solves it →

Solution 02 · Templates and references

Store your templates and references once, and every output comes in your company format.

Template folder

Store report, presentation and letter templates, and agents create in that format.

Reference folder

Store internal rules, guidelines and past files, and agents write based on them.

Common files come with packs

General material such as laws and common guidelines is in the pack, updated by VICS.

Explain it once

Your company’s standards are already in place, so you don’t explain them with every request.

What you gain

- ✓ No more redoing drafts in company format
- ✓ Results that follow your internal rules
- ✓ No more explaining things every time

Concern 03 · First-time users

We tell people to use it, but they don't know what to ask.

Most people are first-time users

Organizations have far more people who just want their work done than people who are at home with AI.

They stall at an empty chat box

Results depend on writing good prompts, so people give up after a few tries.

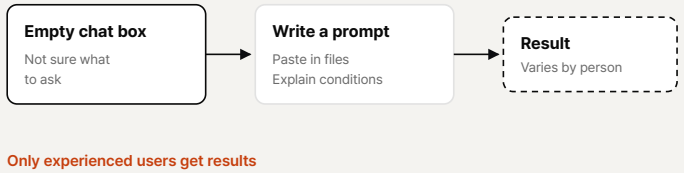

The hidden worry

"That only a few people end up using it."

Solution 03 · Start with an agent

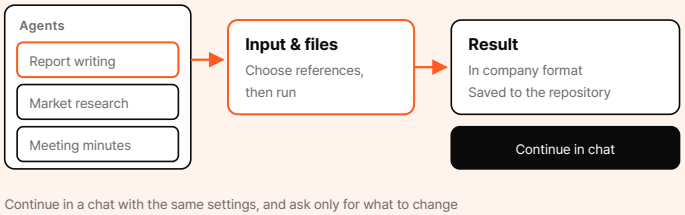

Click an agent to start, then finish it in chat.

Today

Only people who write good prompts get results.

With Yurika

Even first-time users get results with a click.

What you gain

- ✓ Work results from the very first day
- ✓ The impact shows even with light use

Concern 04 · Building agents

We don’t have anyone who can build work agents.

Building them takes experts

Designing work procedures and connecting files and systems is not easy.

Admins have no time

Admins with their own jobs can’t build agents for every department.

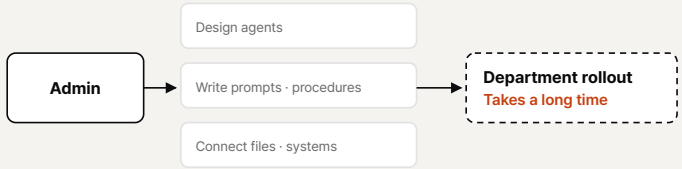

The hidden worry

“Adopting it, only to be left with an empty screen.”

Solution 04 · Add agent packs

Add a pack and agents appear; admins only fill in templates.

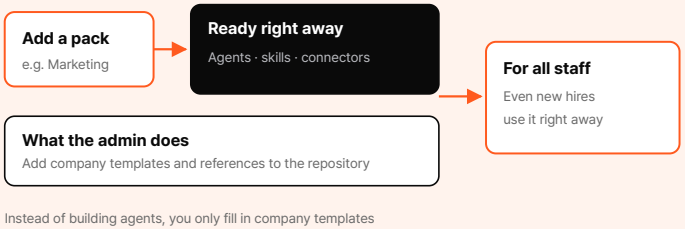

Today

Without a builder, the screen stays empty

You need someone to build agents before you can start.

With Yurika

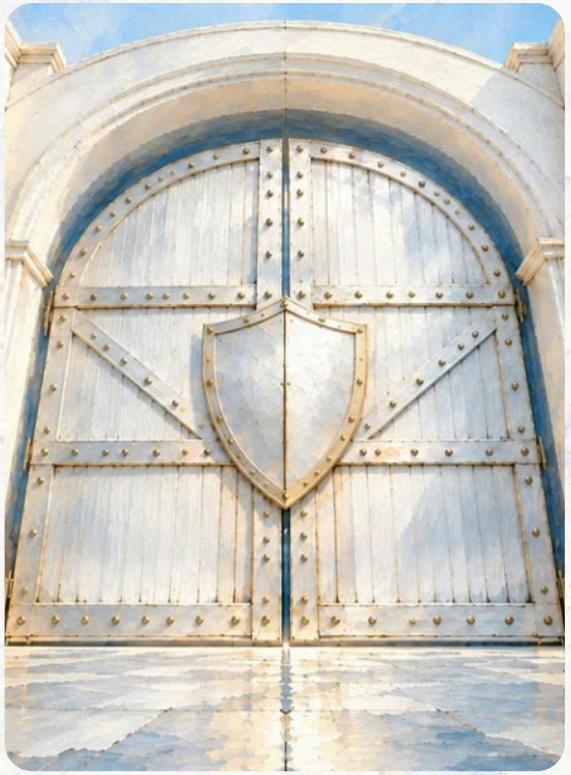

Instead of building agents, you only fill in company templates

The day you add a pack, department agents appear.

What you gain

- ✓ Start without experts to build agents
- ✓ Admin work shrinks to filling in templates

Concern 05 · Management and control

Our AI work ends up scattered across personal accounts.

The question security, audit and finance teams always ask before deciding to adopt.

What happens on the ground

Outputs stay with individuals

Documents and chats made with AI stay in personal accounts and are gone when the person in charge changes.

No one knows what went out

Even when files with customer data are pasted in as they are, the company has no record to check.

Costs show up on the invoice

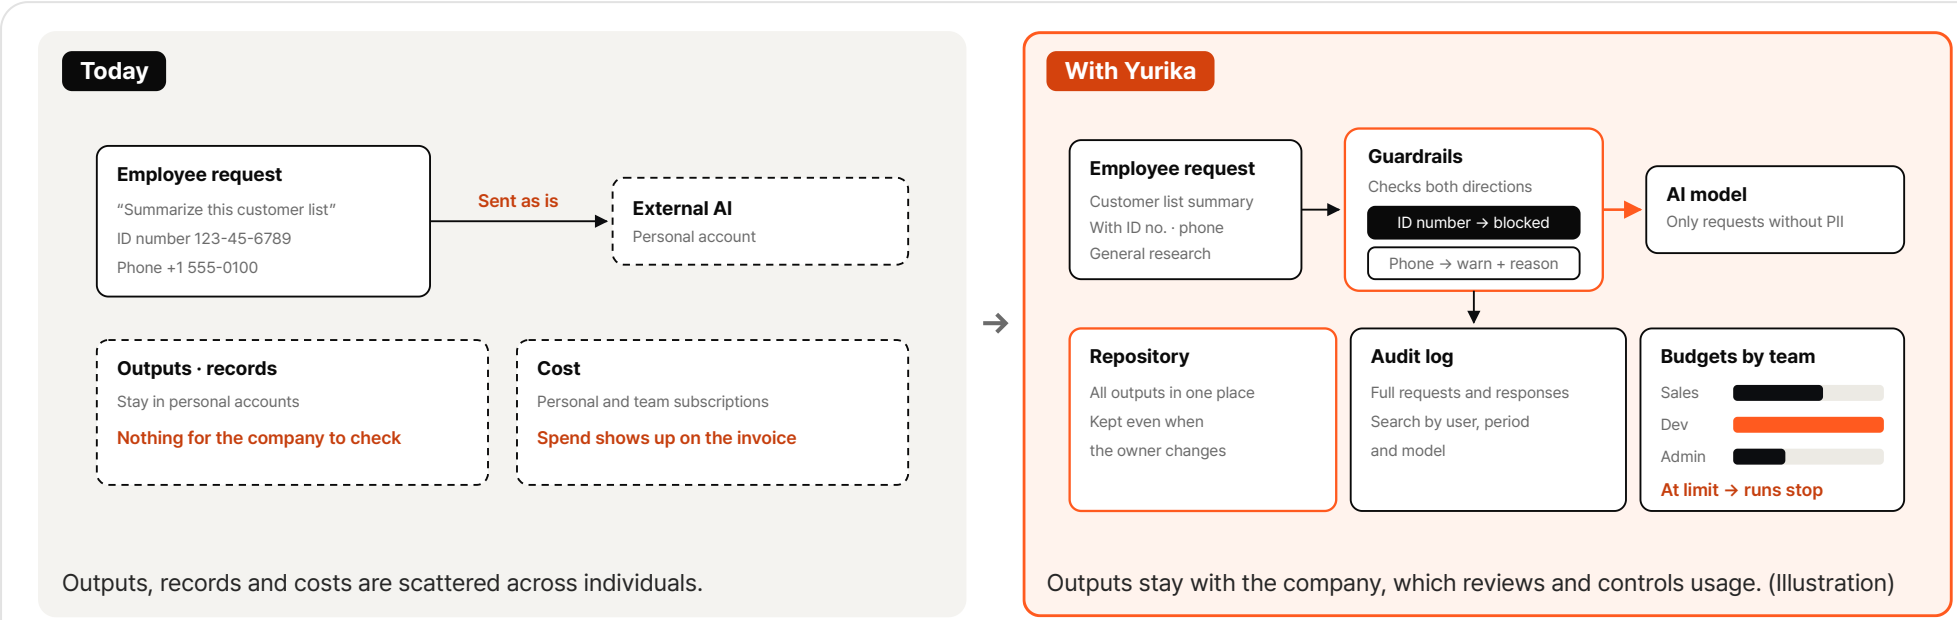

Personal and team subscriptions are scattered, so no one knows what the whole company spends.

The hidden worry **"That company data leaks out beyond our control."**

See how Yurika solves it →

Solution 05 · Repository and control

Outputs collect in the repository, and the company reviews and controls usage.

Outputs go to the repository

Documents and files are managed centrally in the organization's repository.

Block sensitive data from being sent

Register what to block as keywords or patterns; requests and responses are both checked.

Original records kept

Logs user, time, model, request and response, searchable by condition.

Budgets and permissions

Allocate budgets by team in advance, and manage accounts through company sign-in.

What you gain

- ✓ Outputs remain assets of the organization
- ✓ If an incident is suspected, check the original records
- ✓ No spending beyond the budget

Concern 06 · Business systems

We end up copying results into email and the file server by hand.

Results are moved by hand

Staff copy AI results to write emails, save files to the server and add calendar events.

AI doesn't know company systems

AI can't pull information directly from email, file servers or calendars.

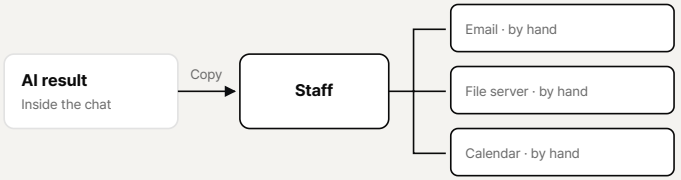

The hidden worry

"That people still do all the work before and after AI."

Solution 06 · Connectors

Connect with connectors, and results go to your business systems.

Today

People move results into each system

People handle the work before and after AI.

With Yurika

Skills that need a connection prompt you to connect before running

Results flow straight into company systems.

What you gain

- ✓ No more moving results by hand
- ✓ Employees connect just by signing in

Concern 07 · Industry fit

“There’s no AI that fits our industry.”

It doesn’t know industry rules and terms

External AI doesn’t know your industry’s rules, terms or ways of working, so you explain every time.

Custom development is a burden

People assume fitting AI to their work takes separate development and a long timeline.

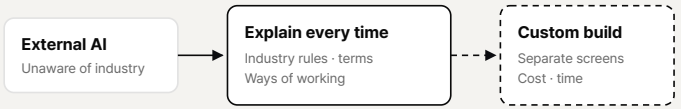

The hidden worry

“Concluding that AI just doesn’t fit our work.”

Solution 07 · Industry and custom packs

Start with an industry pack, and add a custom pack when needed.

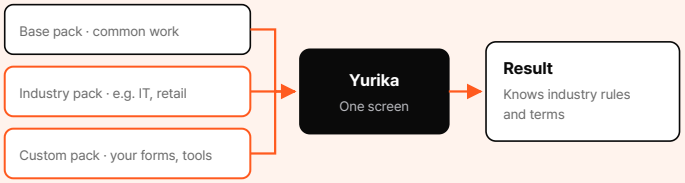

Today

Fitting AI to the industry is left to users

People carry the burden of fitting AI to the industry.

With Yurika

More packs keep coming. Pick and add the ones you need

Customization comes as packs, not new screens.

What you gain

- ✓ Start with AI that knows your industry’s rules and terms
- ✓ Add custom packs and still receive updates

Usage environment

Start right away in the browser, and add the desktop app when you need it.

Standard

Browser

Use it right away, with nothing to install.

- Agents · chat · repository · skills
- Adding packs and admin settings
- Trials also start in the browser

Optional

Desktop app

Works with the files and code on your own PC.

- Work in folders on your PC
- Development and coding work
- Same agents, same skills

Operations · security

Runs as SaaS

New features and packs are applied automatically.

- Automatic updates · nothing to install
- Guardrails · audit log · budgets by team
- Customer-dedicated cloud configuration on request, if you have infrastructure requirements

Skills work the same wherever they run: on server resources in the browser, and on your PC's resources in the desktop app.

Use case examples

Add department packs, and each department's day changes like this.

Marketing pack · Campaign reports

Get performance reports in your company format, right away

What you gain — **instead of time spent compiling,** more time to plan the next campaign.

Today
Staff gather results by channel into Excel, open the last report and copy the numbers over.

→

What Yurika handles
A campaign report agent organizes the results using the company report template and past reports in the repository, then saves them to the file server.

→

What your team does
Check what the numbers mean and set the direction for the next campaign.

Yurika capabilities used: Solution 02 Company templates · Solution 03 Agents · Solution 06 Connectors

Connects to: Report template · Past reports · File server

Sales pack · Customer visit prep

Less time preparing, more time talking with customers

What you gain — **instead of time spent searching for files,** more time to understand the customer.

Today
Before a visit, staff look up company news, past meeting notes and product materials one by one, and edit an old file into a proposal.

→

What Yurika handles
A visit prep agent summarizes public news on the customer with product materials and past meeting notes in the repository, then drafts a proposal in the company template.

→

What your team does
Tailor the draft to the customer and prepare what to discuss during the visit.

Yurika capabilities used: Solution 02 References · Solution 01 Organizational AI · Solution 05 Repository

Connects to: Product materials · Past meeting notes · Proposal template

These are illustrative use cases. Pack names and contents are examples; the actual scope is defined with you, based on your work and data.

Use case examples (continued)

The same approach, across other work.

HR · General affairs pack · Internal inquiries

No more searching for the clause behind every policy question

What you gain — **repeat questions no longer pile up on staff,** and employees don't have to wait.

Today
The same questions on leave, travel expenses and benefits arrive several times a day, and staff look up the rules each time.

→

What Yurika handles
A policy guide agent answers with the relevant clauses, based on the employment rules and HR manual in the repository.

→

What your team does
When rules change, just replace the document in the reference folder, and focus on exceptions that need judgment.

Yurika capabilities used: Solution 02 **Reference folder** · Solution 03 **First-time users** · Solution 05 **Audit log**

Connects to: **Employment rules** · **HR manual** · **Internal notices**

Finance · Accounting pack · Monthly results

Spend your time on interpretation, not calculation

What you gain — **less time reconciling numbers,** more focus on explaining what they mean.

Today
Staff merge several department spreadsheets, calculate actuals against budget, and write separate notes for large variances.

→

What Yurika handles
A results analysis agent reads Excel files and the internal DB, shows actuals against budget and the outliers, and drafts briefing notes in the company template.

→

What your team does
Review the flagged items, confirm the causes, then finish the briefing notes and report.

Yurika capabilities used: Solution 06 **Connectors** · Solution 02 **Company templates** · Solution 05 **Budgets**

Connects to: **Department spreadsheets** · **Internal DB** · **Report template**

These are illustrative use cases. Pack names and contents are examples; the actual scope is defined with you, based on your work and data.

Adoption steps

Try it first, then decide.
Your trial environment becomes your Yurika.

1

Request a trial

Leave your company details and number of users, and we open a trial environment after review.

What you gain

An environment ready to use, with nothing to install

2

15-day trial

Invite colleagues with trial credits and handle real work with the base pack.

What you gain

Proof that it works for your own tasks

3

Contract · go-live

Choose users, packs and a contract term (6 or 12 months). Your trial environment and files carry over.

What you gain

Work continues with nothing to migrate

4

Add packs · expand

Add department and industry packs, and build custom packs together when needed.

What you gain

AI that fits your company better the more you use it

Good to decide before requesting a trial

Users

The departments that will start first, and a rough headcount

First tasks

Two or three tasks that are repetitive or take a long time

Company templates

Report, presentation and letter templates you actually use

Systems to connect

Email, file server, calendar and other tools you use today

Start right away with SaaS

Start with nothing to install; new features and packs arrive through automatic updates.

Customer-dedicated cloud on request

Organizations with infrastructure requirements can discuss a customer-dedicated cloud configuration.

Customize with agent packs

The screen stays the same; we build packs for your work and add them.

Talk to us

Start by telling us your challenges.

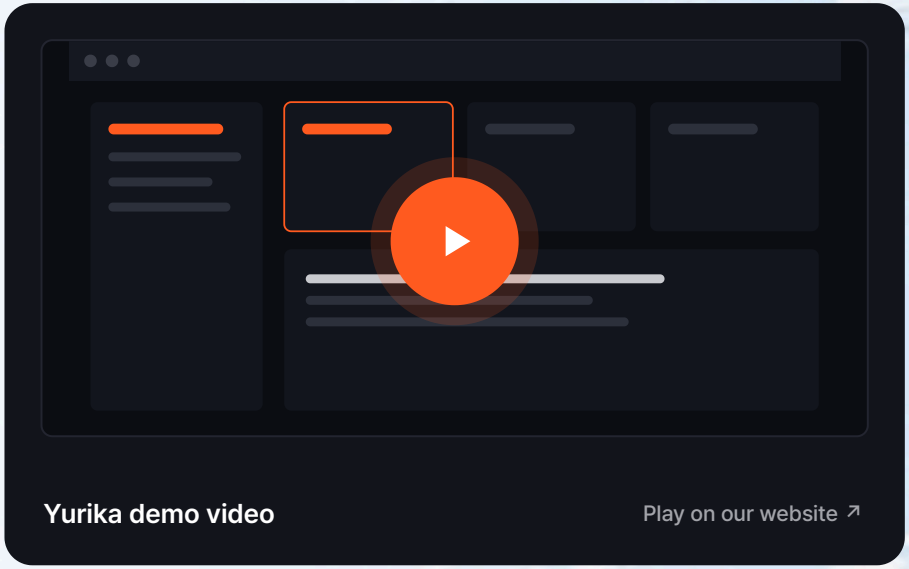

Tell us one department and one task to start with, and we'll open a trial environment with the agent pack that fits that task. To look around first, watch the demo video.

Request a trial · Contact sales →
